No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 5, A Sequence 5, A Sequence 5, A Sequence 5, A

Sequence 2, Application US/09671089;
Patent No. 6780846;
GENERAL INFORMATION;
APPLICANT: Q.Mahony, Daniel J.
APPLICANT: Q.Mahony, Daniel J.
TITLE OF INVENTION: MEMBRANE TRANSLOCATING PEPTIDE DRUG DELIVERY SYSTEM FILE OF INVENTION: MEMBRANE TRANSLOCATING PEPTIDE DRUG DELIVERY SYSTEM;
FILE REFERENCE: E1067/2001B
CURRENT FILING DATE: 2000-09-27
PRIOR APPLICATION NUMBER: 60/156,246
PRIOR PILING DATE: 1999-09-27
NUMBER OF SEQ ID NOS: 59
SOFTWARE: Patentin version 3.1
SEQ ID NO 2
LENGTH: 15
TYPE: PRT
ORGANISM: Artificial Sequence
PEATURE:
PEAT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ; NAME/KEY: MOD_RES

Patent No. 6780846

GENERAL INFORMATION

APPLICANT: Qualpory, Daniel J.

APPLICANT: Lambkin, Imelda J.

TITLE OF INVENTION: MEMBRANE TRANSLOCATING PEPTIDE DRUG DELIVERY SYSTEM

FILE REFERENCE: E1067-20018

CURRENT APPLICATION NUMBER: US/09/671,089

CURRENT APPLICATION NUMBER: 60/156,246

PRIOR APPLICATION UNMER: 60/156,246

PRIOR PLING DATE: 1999-09-27

NUMBER OF SEQ ID NOS: 59

SOFTWARE: Patentin version 3.1

SEG ID NO 4

LENGTH: 19
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  GENERAL INFORMATION:

; GENERAL INFORMATION:
; APPLICANT O'Mahony, Daniel J.
; APPLICANT O'Mahony, Daniel J.
; TITLE OF INVENTION: MEMBRANE TRANSLOCATING PEPTIDE DRUG DELIVERY SYSTEM
; TITLE OF INVENTION NUMBER: US/09/671,089
; CURRENT APPLICANTON NUMBER: US/09/671,089
; CURRENT PELLING DATE: 2000-09-27
; PRIOR FILING DATE: 1999-09-27
; NUMBER OF SEQ ID NOS: 59
; SOFTWARE: Patentin version 3.1
; SEQ ID NO 24
; LENGTH: 17
                                                                                                                                                                                                         RESULT 17
US-09-671-089-58

1 Sequence 58, Application US/09671089

2 Fatent No. 678046

3 GENERAL INFORMATION:

APPLICANT: O'MAHONY, Daniel J.

APPLICANT: Lambkin, Imelad J.

TITLE OF INVENTION: MEMBRANE TRANSLOCATING PEPTIDE DRUG DELIVERY SYSTEM FILE OF INVENTION NUMBER: US/09/671,089

CURRENT APPLICATION NUMBER: US/09/671,089

US-09-671-089-15

Sequence 15, Application US/09671089

Patent No. 6780846

GENERAL INFORMATION:
APPLICAMT: O'MAHONY, Daniel J.
APPLICAMT: Lambkin, Imelda J.
TITLE OF INVERTION: MEMBRANE TRANSLOCATING PEPTIDE DRUG DELIVERY SYSTEM
FILE REFERENCE: E1067/20018
CURRENT APPLICATION NUMBER: US/09/671,089
CURRENT FILING DATE: 2000-09-27
PRIOR APPLICATION NUMBER: 60/156,246
PRIOR PILING DATE: 1999-09-27
NUMBER OF SEQ ID NOS: 59
SOFTWARE: PATENTIN Version 3.1
SEQ ID NO 15
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Length 11;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 7, Application US/09186170

Parent No. 624858

GENERAL INFORMATION:
APPLICANT: Lin, Yao-Zhong
APPLICANT: Donahue, John P.
APPLICANT: Applas, Mauricto
APPLICANT: Applas, Mauricto
APPLICANT: Tan, Zhongia
TITLE OF INVENTION: "Sequence and Method for Genetic Engineering of
Parent No. 624858
TITLE OF INVENTION: Proteins with Cell Membrane Translocating Activity"
FILE REFERENCE: VUS941
CURRENT APPLICATION NUMBER: US/09/186,170
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                              OTHER INFORMATION: Description of Artificial Sequence: Amino acid OTHER INFORMATION: sequence of peptide which transports proteins OTHER INFORMATION: through the cell membrane into the cell.

Patent No. 6551795

GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION NUMBER: US/09/252,991A
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT FILING DATE: 1999-02-18
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR PLING DATE: 1998-02-18
PRIOR PLING DATE: US 60/094,190
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 hypothetical protein F24J7.50 - Arabidopsis thaliana
hypothetical protein F24J7.50 - Arabidopsis thaliana
C;Species: Arabidopsis thaliana (mouse-ear cress)
C;Date: 23.Apr-1999 #sequence_revision 23.Apr-1999 #text_change 09-Jul-2004
C;Accession: T05209
R;Bevan, M.; Vitale, D.; Liguori, R.; Argiriou, A.; De Simone, V.; Bancroft, I.; Mewes, submitted to the Protein Sequence Database, February 1998
A;Reference number: 215403
A;Reference T05209
A;Molecule type: DNA
A;Residues: 1-939 cBSV.
